

# Electric Field

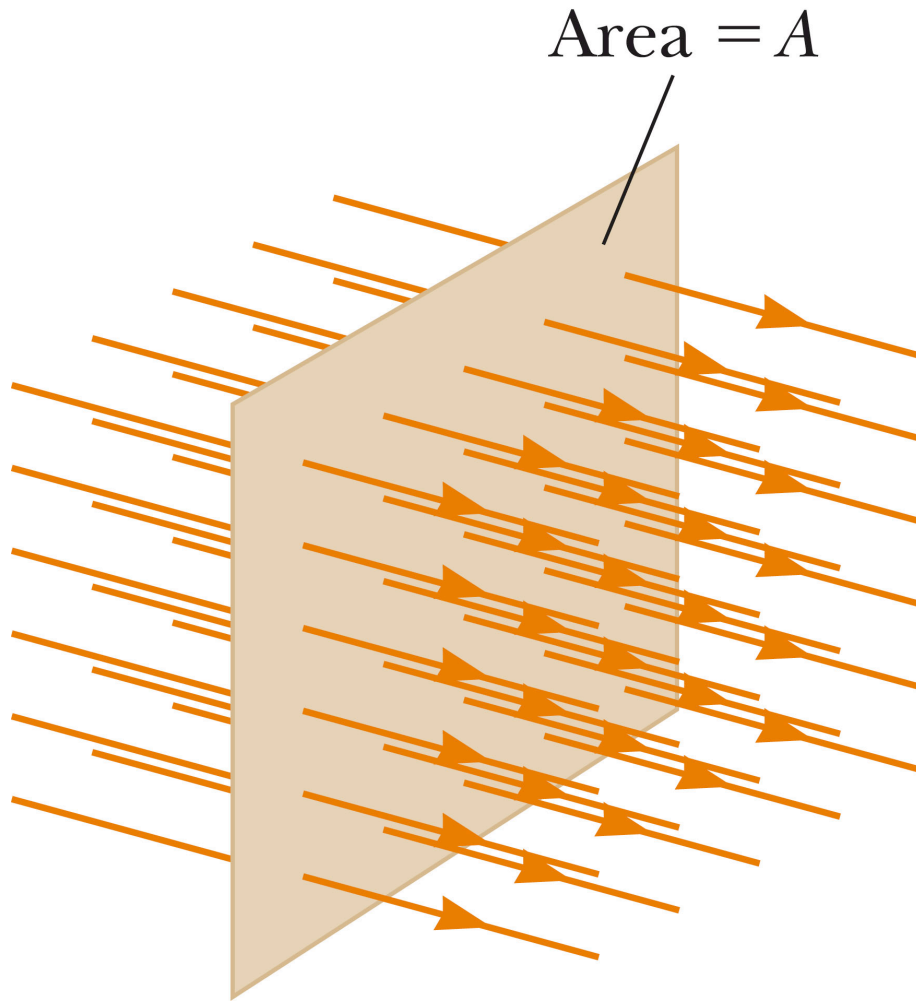

Force on q by Q

$$\vec{F}_{Qq} = \frac{1}{4\pi\epsilon_0} \frac{Qq}{|\vec{r}_{12}|^2} \hat{r}_{12}$$

Definition of Electric field: at this point is

$$\vec{E} = \frac{\vec{F}_{Qq}}{q} = \frac{1}{4\pi\epsilon_0} \frac{Q}{|\vec{r}_{12}|^2} \hat{r}_{12}$$

# Electric Flux

Area =  $A$

$$\Phi = EA$$

Flux:  $\text{N m}^2/\text{C}$

Gauss's Law [doc cam]

When the charge is at the center of the sphere, the electric field is everywhere normal to the surface and constant in magnitude.

Example: Point charge  $q$

Spherical  
gaussian  
surface
